REASONS FOR ALLOWANCE

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on May 31, 2005, has been entered.

The following is an examiner's statement of reasons for allowance:

All of the pending claims are allowed for the reasons of record, as previously allowed on March 01, 2005, as well as over the newly-cited prior art submitted in the RCE. As stated previously, the claims are essentially directed to a chewing gum composition comprising a base, wherein the base comprises high molecular weight polyisobutylene (PIB), and wherein the base is essentially free of non-silica filler. Pages 8-9 of the instant specification expressly define high molecular weight PIB as ranging "from about 200,000 daltons to about 600,000 daltons", wherein the preferred MW is about 400,000.

The prior art discloses the use of polyisobutylene within gum bases, predominantly in the "low molecular weight" form. Although several references utilize what they call a "high molecular weight" PIB, these fall well short of the high MW PIB used in the instant application. For example, newly cited references US PAT 6,194,008 and 5,462,754 disclose "high molecular weight" PIB's with weights of 127 kDa and 95 kDa, respectively. Again, the general state of the prior art asserted that the use of increased MW PIB's made the resultant chewing gum tough, more elastic and thus more difficult to chew, therefore teaching away from the instantly-claimed invention.
